STYLISH, WASHABLE AND COMFORTABLE SHOES FOR CONVALESCENCE AND REHABILITATION.

Handicaps, Inc. is proud to bring you, all the way from France, newly designed shoes for men and women. Strong enough for the street, yet still comfortable enough to be worn as house slippers. These shoes are perfect for most adult patients, at home or in chronic care facilities.

An ingenious hidden feature makes Pullman International Shoes remarkably accomodating. The whole front of the shoe lifts and opens as a unit. While the foot is in place, the front closes and fastens securely in whatever position fits best. The fastening is a hooked material under the tongue, which sticks anywhere on the outer surface of the shoe. Also, there is a zippered backseam, which opens, closes and locks, at any point, to accomodate swelling.

Uppers are fabric; a laminated fully lined velour that stretches and breathes. The upper retains it's shape without them. Soles of molded synthetic elastomer are flexible, long wearing and totally non-skid. The soft foam insoles have terry textured facing, and are removable for washing. The workmanship on these shoes is superb.

Shoes and insoles are completely machine washable in warm water. Shoe trees are supplied for perfect 24 hour drying.

Tough enough to outlast any conventional hospital shoe, Pullman International Shoes cost less than most adult comfort footwear.
